

AP Venom

Hard Red Spring Wheat Variety
Double Strike. Yield + Protein

Highlights

- Versatile for fall or spring seeding
- High yield with very good protein
- Quick emergence with large flag leaf and tillering
- Large seed size, adjust seeding rate accordingly

Disease and Pest Tolerance

Stripe Rust 3

Septoria 2

Fusarium Head Blight 8

Hessian Fly *Susceptible*

Comparison Chart Value 9.....1
Poor *Excellent*

Agronomics

Maturity	Medium
Test Weight	Good
Height	Medium tall
Straw Strength	Very good
Head Type	Awned
Protein	Very good
Seed Size	Large
Planting Date	Fall or spring
Tillering	Good
Moisture Zone	Irrigated

Two-Year Spring Planted Irrigated Trial Summary

Note: these agronomic assessments are made by Syngenta scientists and reflect each variety's relative performance within these characteristics though the 2020 crop year. Specific conditions may cause variations within characteristics. These relative protection values are based on current pest and disease populations and have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends. ©2020 Syngenta. **Some or all of the varieties may be protected under one or more of the following: Plant Variety Protection, United States Plant Patents and/or Utility Patents and may not be propagated or reproduced without authorization.** AgriPro® and the Syngenta logo are trademarks of a Syngenta Group Company.
